Copyright Sensor Tower © 2022. All Rights Reserved. Tencent Gaming Buddy is a free gaming platform created by Chinese state-controlled company Tencent that was recently transformed into the GameLoop platform. The application functions mainly as an Android emulator which allows users to play PUBG Mobile applications. The Gaming Buddy provides a number of tweaks that may not be available on certain mobile devices. Once in the program, you're able to download a number of games from the main interface. It's all rather neatly laid out with a tabbed interface with a selection of available games in a number of categories and the "My Games" tab which lists games which have already been installed. The browsing of games is pretty comprehensive and all games are organized into specific categories: FPS, MOBA, Apps, RPG, Casual, Arcade, Strategy, MMORPG, Auto Battler and ACT. Tencent Gaming Buddy also has optimizations and tweaks for rendering graphics: OpenGL, DirectX, OpenGL and a "Smart Mode". Resolution, Processor, Memory, Anti-aliasing and DPI can also be set. All in all, Gaming Buddy is an interesting way to access Chinese state-run games if they're a niche you're interested in. Features and highlights: Android Emulator Available in Chinese & English. Great usability. Allows better game play. Specifically created for Tencent Games. Tencent Gaming Buddy 1.0.12058.123 on 32-bit and 64-bit PCs. This download is licensed as freeware for the Windows (32-bit and 64-bit) operating system on a laptop or desktop PC from console emulators without restrictions. Tencent Gaming Buddy 1.0.12058.123 is available to all software users as a free download for Windows. Each software is released under license type that can be found on program pages as well as on search or category pages. Here are the most common license types: Freeware programs can be downloaded used free of charge and without any time limitations. Freeware products can be used free of charge for both personal and professional (commercial use). Open Source. Open Source software is software with source code that anyone can inspect, modify or enhance. Programs released under this license can be used at no cost for both personal and commercial purposes. There are many different open source licenses but they all must comply with the Open Source Definition - in brief, the software can be freely used, modified and shared. Free to Play. This license is commonly used for video games and it allows users to download and play the game for free. Basically, a product is offered Free to Play (Freemium) and the user can decide if he wants to pay the money (Premium) for additional features, services, virtual or physical goods that expand the functionality of the game. In some cases, ads may be shown to the users. Demo. Demo programs have a limited functionality for free, but charge for an advanced set of features or for the removal of advertisements from the program's interfaces. In some cases, all the functionality is disabled until the license is purchased. Demos are usually not time-limited (like Trial software) but the functionality is limited. Trial. Trial software allows the user to evaluate the software for a limited amount of time. After that trial period (usually 15 to 90 days) the user can decide whether to buy the software or not. Even though, most trial software products are only time-limited some also have feature limitations. Paid. Usually commercial software or games are produced for sale or to serve a commercial purpose. Tencent Gaming Buddy is a popular Android emulator for PUBG fans and allows you to also play several other Android games on your Windows PC. With this Android emulator, you can improve the overall gaming experience, and play games like PUBG on a large screen. If you're a fan of PUBG Mobile, with this PUBG emulator, you'll be able to use improved controls to enjoy gameplay with multiple configuration settings. Without a doubt, Tencent Gaming Buddy offers an all-round, comprehensive gaming experience. Developed by Tencent, one of the largest game developers in the world, Tencent Gaming Buddy specifically targets PUBG fans. While PUBG remains a leading title in the gaming industry, you can use the emulator to play many other Android games on your Microsoft Windows PC. The app perfectly mimics the mobile versions of different games to ensure the best gaming experience. Like Citra Emulator, Tencent Gaming Buddy works well with both high-end and low-end PCs. As such, you don't have to worry about the hardware configuration of your computer to enjoy a wide range of games. However, it's worth mentioning that low-end PCs might face issues like poor frames per second (FPS) and occasional lags. Is Tencent Gaming Buddy easy to use? Compared to other Android emulators, this one comes with a simpler and cleaner interface. While using the program, you don't need any technical skills or knowledge. In fact, even beginners can use this program to play Android games on PCs without much trouble. Since Tencent Gaming Buddy supports numerous configuration options and settings, you can easily personalize the gaming experience. Tencent Gaming Buddy is a lightweight tool that doesn't affect system performance. All you need to do is download and install the program, and the simple prompts help you set up the games within minutes. Once you're done, you can start playing Android games on your PC without any issues. What does Tencent Gaming Buddy offer? While platforms like RetroArch have been quite popular among emulator fans, Tencent Gaming Buddy takes a more versatile approach. It offers a wide range of features, including the capability to record your gameplay. This allows you to stream the recorded video on popular streaming websites. Tencent Gaming Buddy comes with a full-screen mode, which ensures better viewing. With this emulator's fast and responsive interface, you don't experience any delays. Moreover, you can easily switch between Ultra HD, Full HD, and HD to improve your experience with Android games on PC. Tencent Gaming Buddy offers a seamless gaming experience in both English and Chinese. With this emulator, Windows users can enjoy several games comfortably. There's a default mapping system to allow better controls in the games. As such, you don't have to spend any time mapping controls. Without a doubt, Tencent Gaming Buddy focuses on performance and compatibility. Tencent Gaming Buddy has been designed only for gaming and lets Windows users play a wide range of Android games on PC. With this amazing tool, you'll be able to enjoy games like PUBG Mobile, Piano King, and more. Is Tencent Gaming Buddy a good choice? While there are plenty of emulators like Project64, Tencent Gaming Buddy is a free Android emulator, specifically designed and optimized for PUBG. With this application, you can easily run popular Android games on your desktop computer. While playing the game, controls can be handled with the keyboard and mouse. Since all the controls come pre-mapped, it's easier for anyone to start playing various games from the get-go. The best part about Tencent Gaming Buddy is that the program runs seamlessly on less powerful, older computers. Since most laptops tend to be more powerful than Android smartphones, Tencent Gaming Buddy ensures a much better gaming experience, especially in terms of performance and graphics. A lot of emulators available online provide you with good compatibility for Android games. However, Tencent Gaming Buddy optimizes the experience for PUBG Mobile. If you've been a fan of this game, you won't find an emulator to play PUBG on your Windows PC. Tencent Gaming Buddy offers a functional, enjoyable, and complete gaming experience. Should you download it? Yes, definitely! With the IT giant's backing, Tencent Gaming Buddy has been immensely popular among PUBG fans. It's a hassle-free, reliable, and stable emulator for your Windows PC. Since it's free, you have a good reason to just go ahead and download the platform. Fortnite might still be the reigning champion of battle royale games, but in the mobile space, PUBG Mobile is still virtually unstoppable. And thanks to Tencent Gaming Buddy, the official PUBG Mobile emulator, players can continue the battle on PC. This might seem confusing since PUBG Mobile is essentially a mobile version of the original PC game in the first place. However, there are a number of differences between PUBG and PUBG Mobile that make the two games unique. Now that PUBG is free-to-play, there are fewer differences, but the mobile version still sports a much higher player base and an arguably better experience. Plus, it's much easier to run on weaker PCs. The catch is that you have to put up with certain limitations due to touchscreen controls. But with the Android emulator GameLoop (formerly called Tencent Gaming Buddy) you can get the best of both worlds. If you're one of the 700+ million PUBG Mobile players around the world and happen to be looking for the best PUBG Mobile emulator out there, look no further. GameLoop is the best way to play PUBG Mobile on PC. Editor's note: Tencent Gaming Buddy has been renamed GameLoop since this article was first published, but we've left references to the original name in the text below. What is Tencent Gaming Buddy (AKA GameLoop)? Tencent Gaming Buddy (also known as Tencent Gaming Assistant or GameLoop) is an Android emulator developed by Tencent. It's designed to play some of the most popular mobile games around, including PUBG Mobile, Pokemon Unite, Genshin Impact, Call of Duty Mobile, Mobile Legends, Auto Chess, and more. It also has native integration with Nimo TV, which is a game streaming platform created as a partnership between Tencent and Huya. Huya is one of the largest video game streaming platforms in China, behind Douya, which is also partially owned by Tencent. How to install GameLoop (formerly Tencent Gaming Buddy) Unlike a lot of PC Android emulators, GameLoop (formerly Tencent Gaming Buddy) was first and foremost designed to emulate PUBG Mobile. This means that not only is it optimized for the game, it's also super easy to install. Read also: PUBG Mobile tips and tricks: How to survive and win a battle royale All you need to do is visit the official GameLoop website and download the client. After installing the application, it will automatically begin to download the files you need to play PUBG Mobile on your PC. That's it. No account creation, no VPN, just download and play. Easy peasy. It's worth mentioning that you can install other popular games like Call of Duty Mobile or Genshin Impact. You can install more games via the games tab once you've installed the app. To take advantage of the friends feature, however, you will need to create an account. Another great thing about GameLoop is that it's easy to keep your PUBG Mobile version up to date. Typically after a new patch hits, it takes less than a day for the emulator to be updated as well. Once available, all you need to do is launch the app and it will prompt you to update. Control customization options Just like other mobile emulators, GameLoop lets you customize the control overlay for PUBG Mobile. These resolutions are significantly lower than the PC version of PUBG, but we'd still recommend erring on the lower side if you value FPS. Speaking of which, you can choose the target FPS in the settings as well, from 30 all the way up to 90 FPS. There are a few other options, like adjusting the brightness independently from your monitor and rotating the window to portrait mode. For PUBG Mobile, portrait mode isn't very useful, but you can imagine uses for other games that you might want to play on GameLoop like strategy or management titles. Does PUBG Mobile have cross-platform play? One of the main draws of Fortnite is that it's completely cross-platform. PC, console, and mobile players can all play together, with obvious limits to prevent mouse-and-keyboard players from stomping the competition. GameLoop allows a similar kind of cross-platform play for PUBG Mobile. PUBG Mobile already allows cross-platform play between Android and iOS, but now PC players can get in on the action, too. For players who prefer console games, GameLoop also features controller support. Like Fortnite, PUBG Mobile separates emulator players from mobile players to keep matchmaking fair. If an emulator player queues for squads or duos with a mobile player, they will be matched with other emulator players. Take that into account before inviting your friends on mobile. Inviting friends is easy since your friends list is transferred to GameLoop/Tencent Gaming Buddy when you connect your account. No need to search for names manually! How to log into PUBG Mobile on PC Logging into PUBG Mobile in GameLoop is easy. All you need to do is link your mobile game with a Facebook or Twitter account, then do the same on your computer. When you first connect an account, your avatar will change to your social profile picture (you can change it back if you're overly self-conscious). If you're worried about password or account security, you can always create a dummy account. Be aware that Twitter accounts can be deleted after six months of inactivity, which may affect your PUBG Mobile account. Your Royale Pass status and progress will be shared between PC and mobile. Other than the avatar, logging in has a number of immediate benefits. First of all, your level and unlocked cosmetics will transfer over. As mentioned above, your friends list and crew will transfer over, as well. Most importantly, your Royale Pass status and progress will be loaded and saved in Tencent Gaming Buddy after connecting accounts. If you bit the bullet and paid for the Royale Pass, this is a must to grind out those tiers. Differences between PUBG Mobile and GameLoop (formerly Tencent Gaming Buddy) Although they are essentially the same game, PUBG Mobile on Tencent Gaming Buddy/GameLoop differs slightly from the true mobile experience. The biggest difference is the playerbase. Since PUBG auto-detects emulator players, you are going to be matched with other mouse-and-keyboard using players. Most of these players are a step above casual, so expect a higher skill gap than in mobile matchmaking. Although Tencent is trying to combat it, both versions suffer from hackers ruining games. Another unfortunate side effect is the prevalence of hackers. Tencent is doing its best to combat hacking, but there seems to be a higher number of hackers in the emulator than in the mobile version. Not that they aren't plentiful in both versions at higher ranks. Other than that, it's mostly the same. You'll still find screaming children and people speaking languages you don't understand, but at least now you have the option to mute individual players. There are also many bots and disconnected players in each game, possibly after needing to abandon ship with Tencent Gaming Buddy's built-in boss key. This problem lessens as you move up in the ranks. The best way to play PUBG Mobile on PC If you're looking for a way to play PUBG Mobile on your PC, GameLoop (formerly Tencent Gaming Buddy) is the way to go. There are a number of other Android emulators that allow you to play PUBG Mobile, but none of them offer the same great PUBG performance as the official emulator, GameLoop.
